Objectives:

- To collect household-level data for planning community development under UBA.
- To understand village infrastructure and socio-economic conditions.
- To train students in field survey and community interaction skills.
- To identify key issues requiring institutional support or intervention.
- To strengthen collaboration between the institution and rural communities.

Outcomes:

- Successfully completed the household survey at Nakkala Palle Village.
- Gather valuable data on local needs and living conditions.
- Improved student skills in communication and field data collection.
- Identified potential areas for future development initiatives.
- Strengthened rapport between CIST and the village community.

Summary Report

The Centre for Innovation and Social Transformation (CIST) at KG Reddy College of Engineering and Technology conducted a household survey at Nakkala Palle Village on 25-04-2026 under the Unnat Bharat Abhiyan (UBA) initiative. As part of the survey activity, faculty members Mr. Ravi Kumar and Mr. Sachin, along with a student team, visited the village to collect baseline information and understand the socio-economic conditions, infrastructure needs, and local challenges of the residents.

During the visit, the faculty guided students on effective interaction with villagers, professional communication, data collection methods, and ethical survey practices. The students actively engaged with households and collected relevant information regarding sanitation, education, water supply, livelihood, transportation, and public facilities. The survey was completed successfully with good cooperation from the villagers.

Collectively, the outcomes of the visit support the United Nations Sustainable Development Goals, particularly SDG 17 (Partnerships for Goals) and SDG 11 (Sustainable Communities) by enabling informed planning for resilient and inclusive rural development. Overall, the visit serves as a meaningful step toward sustainable, community-driven development through academic involvement.

The household survey activities conducted under the Unnat Bharat Abhiyan (UBA) serve as an important step in strengthening the relationship between higher educational institutions and rural communities. Through such field-based initiatives, students and faculty gain direct exposure to village life, local governance systems, available resources, and the real challenges faced by rural households. The data collected through these surveys helps in identifying priority areas such as sanitation, drinking water, education, health, transportation, waste management, livelihood opportunities, and digital awareness. Based on the findings, suitable action plans, awareness programs, technical solutions, and community development projects can be designed in future phases. These activities also promote participatory development, where villagers become active partners in solving their own local issues with institutional support. For students, the surveys provide experiential learning, social responsibility, leadership, and problem-solving skills. Overall, the UBA household surveys contribute significantly to sustainable village development

and support national priorities aligned with the Sustainable Development Goals (SDGs) such as Quality Education, Clean Water, Sustainable Communities, and Partnerships for Development.

Impact Analysis:

- Enabled need-based planning for future UBA activities.
- Improved student exposure to rural realities and social responsibility.
- Built trust between villagers and the academic institution.
- Supported evidence-based decision-making for village development.
- Contributed to SDG 11 (Sustainable Communities) and SDG 17 (Partnerships for Goals).
