Objectives:

- To collect household-level data for planning community development under UBA.
- To understand village infrastructure and socio-economic conditions.
- To train students in field survey and community interaction skills.
- To identify key issues requiring institutional support or intervention.
- To strengthen collaboration between the institution and rural communities.

Outcomes:

- Successfully completed the household survey at Yethbar Palle Village.
- Gather valuable data on local needs and living conditions.
- Improved student skills in communication and field data collection.
- Identified potential areas for future development initiatives.
- Strengthened rapport between CIST and the village community.

Summary Report

The CIST team conducted a UBA household survey at Yethbar Palli Village on 25-04-2026. The survey was led by Dr. A. Seshappa along with an assigned student team. The visit aimed to understand household conditions, public infrastructure, and community development needs through direct interaction with residents.

Dr. A. Seshappa guided the students on conducting surveys, recording responses, and interacting respectfully with villagers. Students visited households and collected data related to education, employment, health, sanitation, and other essential facilities. The survey was completed successfully with active student participation and cooperation from the residents.

Collectively, the outcomes of the visit support the United Nations Sustainable Development Goals, particularly SDG 17 (Partnerships for Goals) and SDG 11 (Sustainable Communities) by enabling informed planning for resilient and inclusive rural development. Overall, the visit serves as a meaningful step toward sustainable, community-driven development through academic involvement.

The household survey activities conducted under the Unnat Bharat Abhiyan (UBA) serve as an important step in strengthening the relationship between higher educational institutions and rural communities. Through such field-based initiatives, students and faculty gain direct exposure to village life, local governance systems, available resources, and the real challenges faced by rural households. The data collected through these surveys helps in identifying priority areas such as sanitation, drinking water, education, health, transportation, waste management, livelihood opportunities, and digital awareness. Based on the findings, suitable action plans, awareness programs, technical solutions, and community development projects can be designed in future phases. These activities also promote participatory development, where villagers become active partners in solving their own local issues with institutional support. For students, the surveys provide experiential learning, social responsibility, leadership, and problem-solving skills. Overall, the UBA household surveys contribute significantly to sustainable village development.

and support national priorities aligned with the Sustainable Development Goals (SDGs) such as Quality Education, Clean Water, Sustainable Communities, and Partnerships for Development.

The students are interacting with village residents and taking survey

Impact Analysis:

- Enabled need-based planning for future UBA activities.
- Improved student exposure to rural realities and social responsibility.
- Built trust between villagers and the academic institution.
- Supported evidence-based decision-making for village development.
- Contributed to SDG 11 (Sustainable Communities) and SDG 17 (Partnerships for Goals).
