College	Mar Ephraem College of Engineering and Technology
Title of the Activity	Unnat Bharat Abhiyan (UBA) – Empowering Rural Education through Technology and Community Engagement at St. Antony's High School, Surulacode
Purpose	The purpose of this visit was to implement the Unnat Bharat Abhiyan (UBA) initiative by strengthening educational infrastructure and promoting community engagement. The activities included sponsoring a desktop computer, installing a multimedia projector and projection screen, conducting an Orientation Programme for school teachers, and carrying out a field survey to understand the educational and developmental needs of the local community.
Date	21 July 2026
Targeted Participants	Teachers, Students of St. Antony's High School, Surulacode, and the Local Community
Outcomes	The programme significantly contributed to the educational advancement and overall welfare of the rural community by strengthening the school's technological infrastructure and promoting digital learning. Through the installation of a desktop computer, multimedia projector, and projection screen, the school gained improved teaching and learning facilities. The Orientation Programme enhanced teachers' knowledge of technology-enabled teaching practices, while the field survey identified the educational, technical, and developmental needs of the school and the surrounding community. These findings will support the implementation of innovative and sustainable technology-based solutions, helping to improve digital literacy, educational quality, and the socio-economic well-being of the rural community through future Unnat Bharat Abhiyan (UBA) initiatives.

Report summary	Under the Unnat Bharat Abhiyan (UBA) initiative, Mar Ephraem College of Engineering and Technology successfully implemented the project titled "Empowering Rural Education through Technology and Community Engagement" at St. Antony's High School, Surulacode to strengthen rural education and promote sustainable community development through technology. The programme included the installation of a desktop computer, multimedia projector, and projection screen to enhance digital learning, along with an Orientation Programme for teachers on technology-enabled teaching practices. A comprehensive field survey was conducted to identify the educational, technical, digital, and developmental needs of the school and the surrounding rural community, providing valuable insights for implementing innovative and sustainable technology-based solutions. The initiative strengthened collaboration between the institution, school, and local community while promoting digital literacy, improving educational quality, and supporting the overall welfare and socio-economic development of the rural community. It also laid a strong foundation for future UBA activities aimed at addressing local challenges through appropriate technological interventions and community engagement. Mar Ephraem College of Engineering and Technology expresses its sincere gratitude to the Headmistress, teachers, students, and the local community of St. Antony's High School, Surulacode, for their warm hospitality, wholehearted cooperation, and active participation, which contributed significantly to the successful implementation of the programme.
