Objectives:

- To learn the rural life
- To empathise with the village people on identified problem
- To scope the problem

Outcomes:

- Able to identify Criteria and Constraints for selected problem statement
- Able to understand existing solutions of identified problem
- Can be able to know how village can be transformed from last two decades
- Able to understand Traditional practices of villagers on sustainability , environment perspective.

Summary Report on Jaggaipally Village Mahaboobnagar District Visit

CIST (Centre for Innovation and rural Transformation) in association with UBA Team along with 1st yr CSE-A, ECE, CSM& Mechanical department students visited Jaggaipally Village as part of Social Innovation course to scope the selected problem statement in the village through interacting with the end users (Villagers), Through the interaction students have identified following problems-

- School is not available in the village, Children are walking 3kms for basic education which is available at Upperpally Village
- There is no public transport facility from the village. They are depending on Autos and other individual transport

About Jaggaipally: Jaggaipally is a small Village/hamlet in Ghanpur Mandal in Mahbubnagar District of Telangana State, India. It comes under Upperpally Panchayath. It belongs to Telangana region. As part Telangana Districts re-organisation, Jaggaipally Village Ghanpur Mandal re organised from Mahbubnagar District to Wanaparthy district. It is located 24 KM towards South from District headquarters Mahabubnagar.

Fig: Students and Faculty interacting with End users

Impact Analysis:

- The students identified criteria and constraints for the selected problem statement.
- The students learnt about existing solutions.
- Students got an idea on how village changed from last one decade
- They identified the main requirements of village.

Summary Report on Kandur Village Mahaboobnagar District Visit

CIST (Centre for Innovation and rural Transformation) in association with UBA Team along with 1st yr CSE-A, ECE, CSM& Mechanical department students visited Kandur Village as part of Social Innovation course to scope the selected problem statement in the village through interacting with the end users (Villagers), Through the interaction students have identified following problems-

- Drainage Water accumulates in the residential Areas
- Lack of digital literacy facilities in school and no proper infrastructure facilities
- There is no public transport facility from the village. They are depending on Autos and other individual transport

About Kandur: Kandur village is in Addakal mandal of Mahbubnagar district in Telangana, India. It is situated 8km away from sub-district headquarter Addakal (tehsildar office) and 32km away from district headquarter Mahbubnagar. As per 2009 stats, Kandur village is also a gram panchayat. The total geographical area of village is 1808 hectares. Kandur has a total population of 5,121 peoples, out of which male population is 2,549 while female population is 2,572. Literacy rate of kandur village is 44.89% out of which 53.35% males and 36.51% females are literate. There are about 1,036 houses in kandur village. Pincode of kandur village locality is 509382. Mahbubnagar is nearest town to kandur for all major economic activities, which is approximately 32km away.

Fig: Students and Faculty interacting with End users

Impact Analysis:

- The students identified criteria and constraints for the selected problem statement.
- The students learnt about existing solutions.
- Students got an idea on how village changed from last one decade
- They identified the main requirements of village.

08/06/23

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement - Water tank cleaning in Opperpally

Alignment to Sustainable Development Goals - SDG '6' - clean water and sanitation

Part I - Analysis of End-User

- Who is the end user?

Village/Old people, some of them live by pension
Some unemployed, their sons have migrated to Hyderabad for jobs

- What is the user's problem that needs a solution?

The water in 3 tanks of the village are undrinkable and one of the tank is leaking without taps. Some of them are not getting water from ~~taps~~ ~~taps~~

- Why is the problem important to solve?

The old people have to go long distances for drinking water. Their sorrows and problems are not getting answered.

- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages
- Pictures of visit

70% of people in upper pally are old people, some of the villagers are complaining about lack of water. They're not receiving tap water. For that they have to walk near well to refill their pots. This includes heavy strain on body. We have interacted with many people and knew their complains. The village is in dire need of water tank cleaning, this would help the country people a lot.

- Abhilash Goud

* FOUND " NEW " PROBLEM STATEMENTS:

* Farmers have stopped jowar, millets because of wild boars problem in the farms. — (UPPERPALLY)

* No higher classes in school only 1st to 7th

* No dedicated village hospital

↳ JAGAYAPALLY PROBLEMS :

- * No Hospital Had to go for town
- * School is closed (lack of teachers). 1 hour walk for students to go to another town school

08/06/23

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement - 25. The village of panchalingale primarily cultivates onions, potatoes, the harvesting requires bending down which can cause body/back pain

Alignment to Sustainable Development Goals -

Goal 8 :- Decent work & economic growth

Goal 3 :- Good health & well being

Part I - Analysis of End-User

- Who is the end user?

The end users are the farmers of the village

- What is the user's problem that needs a solution?

Crop harvesting requires farmers to bend over which causes body pains and back aches

- Why is the problem important to solve?

Everyone deserves a comfortable work life regardless of their occupation. The problem affects the farmers health and comfort. So it is important to solve it as health plays a major role in livelihood.

- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages
- Pictures of visit

The other stake holders are labours who work in the farm

The discussion with user led us to gain more knowledge about their situation. Bending over is causing back aches, heavy rains are causing the crop to get spoilt, old people are facing health issues while farming, insects eating crops they need machines to sow paddy seeds and also need machines to effectively harvesting of groundnut crops.

Currently, no machine has been provided to address this problem.

An existing solution was proposed but it has failed to satisfy the farmers needs and requirements. The crops were spilled on the farmland requiring farmers to bend and pick them causing more work.

Villages visited: upperpally, kandur

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement - 20

Alignment to Sustainable Development Goals - SDG(6) → clean water and sanitation.

Part I - Analysis of End-User

- Who is the end user?

Village people

- What is the user's problem that needs a solution? water tanks and sumps need regular cleaning to maintain good water quality and prevent the growth of bacteria or algae. if not cleared it causes skin diseases and other health issues.
- Why is the problem important to solve?
To avoid skin diseases and other health issues because of water impurity.
- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now drinking water not available so they using domestic water for drinking purpose.
- Any existing solution available if Yes then what are the drawbacks and advantages They are using beaching powder kill the bacteria and algae.
- Pictures of visit
drawbacks for this solution is using excess of beaching powder causes health issues.
Advantages of this solution is killing bacteria and algae in water.

Course - Design Thinking and Sustainable Development

Selected Problem Statement - Regular Cleaning of Water Tanks.

Alignment to Sustainable Development Goals - 06 [Clean water and Sanitization].

Part I - Analysis of End-User

- Who is the end user?

Uppanpally village people.

- What is the user's problem that needs a solution?

Regular cleaning of water tanks and sumps.
And to prevent the growth of bacteria and algae.

- Why is the problem important to solve?

To prevent from skin ~~diseases~~ diseases. And important problem is scarcity of water.

- To remove any buildup bacteria and algae.
- Who are the other stakeholders? workers, village head [Secretariat].
- Discussion with stakeholders/user - village people and workers
- How they are addressing this problem now - ~~odour~~ less water and algae.
- Any existing solution available if Yes then what are the drawbacks and advantages - Yes, Regular cleaning of water tanks,
- Pictures of visit → atleast once a month by bleaching powder and every three months complete tank cleaning, by machinery (or) by people.

Alignment to Sustainable Development Goals - 06 [Clean water and Sanitation]

Part I - Analysis of End-User

- Who is the end user?

Oppaspally Village people.

- What is the user's problem that needs a solution?

^{user's problem}
No, ~~water~~ supply in water tanks

There is no regular formation of cleaning.

- Why is the problem important to solve?

To prevent from skin diseases, allergies.
The important problem is scarcity of water,
and cleaning with machinery tools.

Solution

Regular cleaning of water tanks and sumps

To prevent the growth of bacteria and algae skin diseases

- Who are the other stakeholders? - Worker, village head [secretariat]

Discussion with stakeholders/user - Village people and worker.

How they are addressing this problem now - odor less water and algae.

Any existing solution available if Yes then what are the drawbacks and advantages Yes,

cleaning of water tanks. by using bleaching powder once a month, and clean the tank with machinery with 3 months after by people.

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement - Issues related to schools to urban areas

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?

→ The end users are students.

- What is the user's problem that needs a solution?

→ There is lack of basic amenities & serious issue need to be addressed like no proper classroom, faculty & washrooms etc...

- Why is the problem important to solve?

↳ Schools & Education for children is very much important to solve. When these students are provided with every luxury then learning takes place and this will be a good base for bright future.

- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages

Course - Design Thinking and Sustainable Development

Selected Problem Statement - Interacting with school students about their problems

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?

Govt School students at upperapally village.

- What is the user's problem that needs a solution?

- They don't have sufficient place to sit & for 137 students, they have only two class rooms.

- There is no restrooms & there is no furniture for both teachers & student

- Why is the problem important to solve?

There are 137 students are studying in the school, other children are moving to city (30km away from the village). cleanliness is the main problem in the school

- Who are the other stakeholders? - Teachers and village people
- Discussion with stakeholders/user - Discussion with school children, we came to know their prob)
- How they are addressing this problem now - They iteratively addressed this problem
- Any existing solution available if Yes then what are the drawbacks and advantages -

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement -

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?

Farmers is the end user.

- What is the user's problem that needs a solution?

Farmers are seeding the seeds with labour.
It takes more time and high cost. They want to prepare a machine with low cost and less labour to complete the work.

- Why is the problem important to solve?

Farmers are investing the so much money on crop harvesting but due to weather condition or any problem they are going to debts. From this problem farmers are paying so much money to labour and takes more time.

- Who are the other stakeholders? → villagers.
- Discussion with stakeholders/user → villagers and users both.
- How they are addressing this problem now → by experiences.
- Any existing solution available if Yes then what are the drawbacks and advantages → Yes, by providing machine, labour lose their work.
- Pictures of visit

- 5) Akash — 22QMIAG617

From the village visiting we came to know that farmers are facing many problems. They are harvesting the crops based on the seasons. They have less work in the fields and go to the Tadhehally for working as the workers in company as cleaners and Mansoon work. There is no Government schools to students also they went to the private schools for the distance of 10 km. There is no Government ^{hospital} also not available to the villagers they went to the city beside village. Now a day's farmers also send their childrens to the private schools by paying lakhs of fees. Overall the villagers are working in their village when work is available if there is no work they went to the city beside the village.

Course - Design Thinking and Sustainable Development

Selected Problem Statement - problem statement No-15.

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?

Trader/farmer is the end user.

- What is the user's problem that needs a solution?

loading and unloading goods, resulting in more labour work, loss of grains, more manual work resulting in time waste, where machine takes less time.

- Why is the problem important to solve?

More manual work results in more financial loss to the farmer or trader.

- Who are the other stakeholders? villagers/traders.
- Discussion with stakeholders/user villagers.
- How they are addressing this problem now By experiencing.
- Any existing solution available if Yes then what are the drawbacks and advantages we need to find a solution.
- Pictures of visit

Team

- 1) Ganapalli Kishore - 22QMI1A6621 - CSM
- 2) Souta Shiva Kumar - 22QMI1A6654 - CSM

By enquiring the villagers in Chinnapally we got to know that villagers are facing many problems. They are having less work in the fields. and after that they are going to Tadcherla to work as labours and in the companies as cleaners. There are no government schools in the village, if there also the parents are not willing to send their children to government school. They are sending their children to private schools which is 10km far from the village.

Selected Problem Statement - Problem statement No-14

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?

farmers. is the end user

- What is the user's problem that needs a solution?

- the crops are getting damage by pigs at the night time
- Morning time they can manage the crops but at the time

The pigs are coming and damaging.

- Why is the problem important to solve?

Because the crops are getting damaged without proper maintenance the crops cannot be saved by animals like pig. so this problem is too important to solve

- Who are the other stakeholders? Trades/farmers.
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages fencing wire there but drawbacks are animals can break it.

Course - Design Thinking and Sustainable Development

Selected Problem Statement - *The farmers in chinapelly village are facing a major challenge of controlling weed growth in their crop fields.*

Alignment to Sustainable Development Goals - (15) SDG *Life on land.*

Part I - Analysis of End-User

- Who is the end user?

Komuraviah (65) - [Farmer]

From - Peddapalli

- What is the user's problem that needs a solution?

*Unavailability of workers.
Nutrition for crops are getting lower.
Labour charges are more.*

- Why is the problem important to solve?

The problem is important to solve because the crops are destroying day by day. Crop yielding efficiency is low.

- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages

Selected Problem Statement - *Paddy seeding*

Alignment to Sustainable Development Goals - *3, 8*

Part I - Analysis of End-User

- Who is the end user?

*Bharathamma .
Laxmamma
Padmamma*

- What is the user's problem that needs a solution?

- 1) No hospitals*
- 2) Wild boars destroying their crops*
- 3) For paddy seeding 6000 per acres .*
- 4) No RTC buses .*

- Why is the problem important to solve?

- 1) If people get any health problem they move to far place for the treatment .*
- 2) Due to wild boars people are losing their investment on crops .*
- 3) Due to this farmers can't pay sufficient amount of money and they face financial problems .*

Course - Design Thinking and Sustainable Development

Selected Problem Statement - *Rain Crop damage by wild boars and animals*

Alignment to Sustainable Development Goals -

Part I - Analysis of End-User

- Who is the end user?
villagers
- What is the user's problem that needs a solution?
crop damage by wildboars and animals so, that's why crops are damaging it leads to crop damage and less productivity.
- Why is the problem important to solve?
less productivity, economical loss, to protect the crops.
- Who are the other stakeholders? *farmers are the other stakeholders.*
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages

Users are addressing this problem like their crops are damaged by animals. especially, peanuts (groundnuts) plants are damaged more when compared to other crops. while, paddy and other crops are not damaged much more.

existing solution

Yes, one solution exist that is using solar fencing and bombs. Animals like wildboars are fearing about the bombs so keeping that bombs in the field leads to prevent the crop damage. But, using bombs leads to the sound pollution and air pollution. so it is one of the advantage and disadvantage.

Course - Design Thinking and Sustainable Development

Selected Problem Statement - plastic wastage

Alignment to Sustainable Development Goals - sdg-09

Part I - Analysis of End-User

- Who is the end user?

It's is a environmental issue.

fibers, sheets and film, strapping, food and beverage bottles and nonfood containers of plastic.

- What is the user's problem that needs a solution?

This marine litter and plastic pollution endangers aquatic life, threatens human health and results in myriad hidden costs for the economy.

- Why is the problem important to solve?

Because of usage of plastic is increasing

it will be affect the land and natural processes reducing ecosystems ability production capabilities solve

- Who are the other stakeholders?

- Discussion with stakeholders/user

- How they are addressing this problem now

- Any existing solution available if Yes then what are the drawbacks and advantages

- Pictures of visit

Pollution demonstrate that the problem of plastic.

Selected Problem Statement - Crop damage

Alignment to Sustainable Development Goals - SDG-02

Part I - Analysis of End-User

- Who is the end user?

Farmers

- What is the user's problem that needs a solution?

^{Problem}
1) How can protect crop from pigs and peacocks.
2. farmer take care of their crops?

- Why is the problem important to solve?

castor oil is a natural repellent that keeps away
burrowing pigs and peacocks

- Spraying chemical. Insecticides.

- Who are the other stakeholders?

②. Crops are growing
weed and kill crop pests.

- Discussion with stakeholders/user

- How they are addressing this problem now

TEAM NO: 10

CSE-AIIMC

12/06/23

Design Report Template

Course - Design Thinking and Sustainable Development

Selected Problem Statement - 12

Alignment to Sustainable Development Goals – 02 ("zero hunger")

Part I - Analysis of End-User

- Who is the end user?

Farmers

- What is the user's problem that needs a solution?

The farmers are facing a major problems in controlling weed growth in their crop fields. They are compelled to pull the weeds manually.

- Why is the problem important to solve?

This process is time consuming and requires hiring additional laborers. It resulting in higher labor costs, so, farmers need a weed removing machine.

- Who are the other stakeholders?
- Discussion with stakeholders/user
- How they are addressing this problem now
- Any existing solution available if Yes then what are the drawbacks and advantages
- Pictures of visit

- Other stakeholders are laborers.
- Discussion with stakeholders/users:

Case i: Mrs. Rangamma, a farmer in Chinnapally village facing lot of problems in buying fertilizers. because, there are no fertilizers near by their village.

→ The laborers are charging Rs. 600 per day during the paddy season.

Case ii :- Ramachandra Reddy is also a farmer who loses his ~~field~~ land during the construction of (katta). He also facing the same problems that we have discussed in case i.

from the above, we have come across that, they don't know about the weed removing machine and paddy cultivator.

- yes, the existing solution is available.
- By using weed removing machine, we can remove the weeds easily without any labor work
- It doesn't require much time.
