On

An 8 Week Internship on Product Design

From 22nd May 2023 to 14th July 2023

Organized by

Centre for Innovation and Social Transformation (CIST)

In association with

Institution's Innovation Council (IIC)

Submitted by

B. Lingam

Assistant Professor-EEE

CIST-Coordinator

Head-CIST

PRINCIPAL

Principal
KG Reddy College of Engineering & Technology
Chilkur (V), Moinabad (M)
R.R. Dist, Telangana

Objectives: This internship program helps students in following aspects

- Skill Development
- Enhance Creativity and Innovation
- Promote User-Centric Design
- Understanding Marketing Strategies
- Empower Entrepreneurial Ambitions

Outcomes: After completion of this internship, the students will be able to understand

- Proficient Product Designs
- Market-Ready Products
- User-Centered Approach
- Strategic Marketers
- Entrepreneurial Mindset

Resource Person: Mr. Vasuki Nandan Nimmagadda, Founder of Vector 52 Design and Consulting

Summary report on An 8 Week Internship on Product Design

The Center for Innovation and Social Transformation (CIST) organized an 8-week internship program on Product Design, catering to 43 second-year students from various branches. The objective of the program was to provide students with valuable insights into product design, marketing strategies, design thinking, and exposure to CREO software. Mr. Vasuki Nandan Nimmagadda, a seasoned expert in the field, served as the resource person, and the faculty team of CIST coordinated the program.

The 8-week internship program was carefully designed to offer a holistic learning experience to the participating students. Throughout the program, they were exposed to different facets of product design, from ideation to execution. The curriculum encompassed three main components:

Marketing Strategies: Students were introduced to various marketing strategies to understand how to identify target audiences, create effective marketing plans, and promote their products in a competitive market. This knowledge was crucial in shaping their products to meet market demands.

Design Thinking: The internship program emphasized the importance of design thinking in the product development process. Students learned how to empathize with potential users, define problems, ideate, prototype, and iterate designs based on user feedback. This approach fostered a user-centric mindset among the participants.

CREO Software: To empower the students with practical skills, they were trained in using CREO software for computer-aided design (CAD). This tool allowed them to translate their creative ideas into digital prototypes efficiently.

Project Presentations and Start-up Opportunities:

At the end of the 8-week program, the students were required to present the progress of their respective projects. The presentations highlighted the application of marketing strategies, design thinking principles, and the utilization of CREO software in their product design journey. The internship program yielded positive outcomes, both in terms of skills development and entrepreneurial opportunities.

The 8-week internship program on Product Design conducted by the Center for Innovation and Social Transformation (CIST) proved to be a resounding success. Through a well-structured curriculum and guidance from Mr. Vasuki Nandan Nimmagadda, the students gained valuable insights into product design, marketing strategies, design thinking, and CREO software. The program not only enhanced their skills but also sparked entrepreneurial ambitions among some participants. By encouraging five teams to establish their start-ups, CIST effectively contributed to fostering a culture of innovation and entrepreneurship among the students. The program's impact is expected to resonate long after its conclusion, as these aspiring entrepreneurs set out to make their mark in the world of product design and innovation.

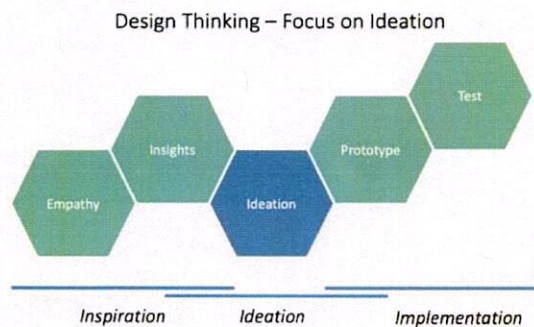

This is an 8 week course and the following topics were covered week wise

Week-1&2: Introduction to Product Development:

Product development is the complete process of taking an idea from concept to delivery and beyond. Whether you are delivering a brand-new offering or enhancing an existing product, the product development cycle begins long before anything gets built. It encompasses everything from brainstorming the initial concept to strategically planning, building, and releasing it to market — and then measuring its success. Traditionally, product development was equated with the build phase of the product lifecycle. For teams following strict waterfall processes, requirements were defined upfront and implemented in sequential phases. Most product teams now embrace a more iterative approach based on agile methodologies which we will study about later. Customer feedback is incorporated early and often, work is released incrementally, and change is expected and welcome. Methodologies aside, product development today is about much more than "how" a product is built. It is the "why," "what," and "when" — involving cross-functional work from product management and engineering all the way to product marketing. Your goal is to work together to build, launch, and refine a product that customers love.

Week-3&4: Market Research and product ideation

Product design and development typically involve several interconnected steps that guide the process from conceptualization to the final product. While the specific steps may vary depending on the organisation and the nature of the product, here is a general framework:

Week-5&6: Concept Design and Technical Design:

Design refers to the process of creating and planning the aesthetics, functionality, and structure of an object, system, or experience. It involves making deliberate decisions and solving problems to achieve a specific goal or outcome. Design can encompass various domains, including product design, graphic design, industrial design, user interface (UI) design, architecture, fashion design, and more.

Technical design refers to the process of creating detailed specifications and plans for the development or construction of a product, system, or component. It involves translating the conceptual or high-level requirements into practical and actionable design solutions. Technical design encompasses various aspects such as architecture, components, materials, manufacturing processes, functionality, and performance.

Week-7&8:3D Modelling Exercises:

3D modeling is the art and science of creating digital representations of objects, characters, environments, and more in three-dimensional space. It's a fundamental technique used across various industries, including animation, video games, architecture, product design, and virtual reality. 3D modeling involves using specialized software to construct intricate geometries, surfaces, and textures that mimic real-world objects. Artists and designers manipulate these digital structures to bring their creative visions to life, whether it's designing a futuristic building, crafting a lifelike character for a game, or prototyping a new product. The process requires a blend of technical skills, artistic sensibilities, and an understanding of spatial relationships, resulting in visually compelling and functional 3D models that serve as the foundation for a wide range of visual and interactive experiences. The students were exercised the basics of 3D model like head-phones, calculator. Later the students designed 3D models for their own projects.

Top Skills

Consulting Engineering

3D Computer Aided Design (3D CAD)

Industrial Design

Vasuki Nandan Nimmagadda

Engineering, Design and Consulting | Mechanical Engineer with 9+ years of experience across industries
Hyderabad, Telangana, India

Summary

Internationally experienced professional with 9+ years of experience in the mechanical industry including product design, development and consulting.

- Expertise in design, product and quality techniques for various industries
- Consistent track record in developing designs and solutions, and completing projects to specification
- Effective communicator with staff across all levels of organisation

Experience

Vector51 Design and Consulting

Founder

February 2020 - Present (3 years 6 months)

Hyderabad, Telangana, India

Multidisciplinary engineering, design and consulting firm with diverse private sector experience.

- Design of postal kiosk for Krato
- Design of hydroponics kits for a local entrepreneur
- Design and execution of algorithms for an EdTech game by BetterByDesign
- Design and manufacture of steampunk snakes and ladders game by MadeBySparsha
- Design and manufacture of damascus axe and mechanism for MadeBySparsha
- Design of kneeling chair for SBWoodCustoms
- Manufacture and quality optimization using jigs and fixtures for Dastkari India
- Manufacture design and execution of slotties for BetterByDesign
- Design of meditation stools and lumbar support for SBWoodCustoms
- Self-funded projects including self cleaning litter box and methanol fueled engine among others

Freelance

Senior Engineering Consultant

January 2017 - January 2020 (3 years 1 month)

- Led reverse engineering of the entire unit including heating chambers, boilers, pumps, etc
- Provided leadership in plant design to ensure efficient and optimal functioning of the project using operations research, PPC, and industrial engineering
- Planned and executed relocation of a 50 mega liter biotechnology unit to client's new unit

Sports Direct Group

Sales Assistant

June 2015 - July 2016 (1 year 2 months)

- Interacted with clients and customers to provide product knowledge and customer service
- Ranked No 1 Salesman in the store over majority of the work period for excellence in customer centric approach
- Assisted store manager in store maintenance and complying with company regulations

Joflo Industries Pvt Ltd

Design Engineer

March 2012 - March 2014 (2 years 1 month)

- Designed 2 axis variable speed turntables for automated Submerged Arc welding
- Collaborated with different departments to design jigs and fixtures required for fabrication and machining
- Using Operations Research techniques, performed production planning for manufacture of 25 centrifuges per month for optimization of manufacturing, machinery, quality control and deadline punctuality

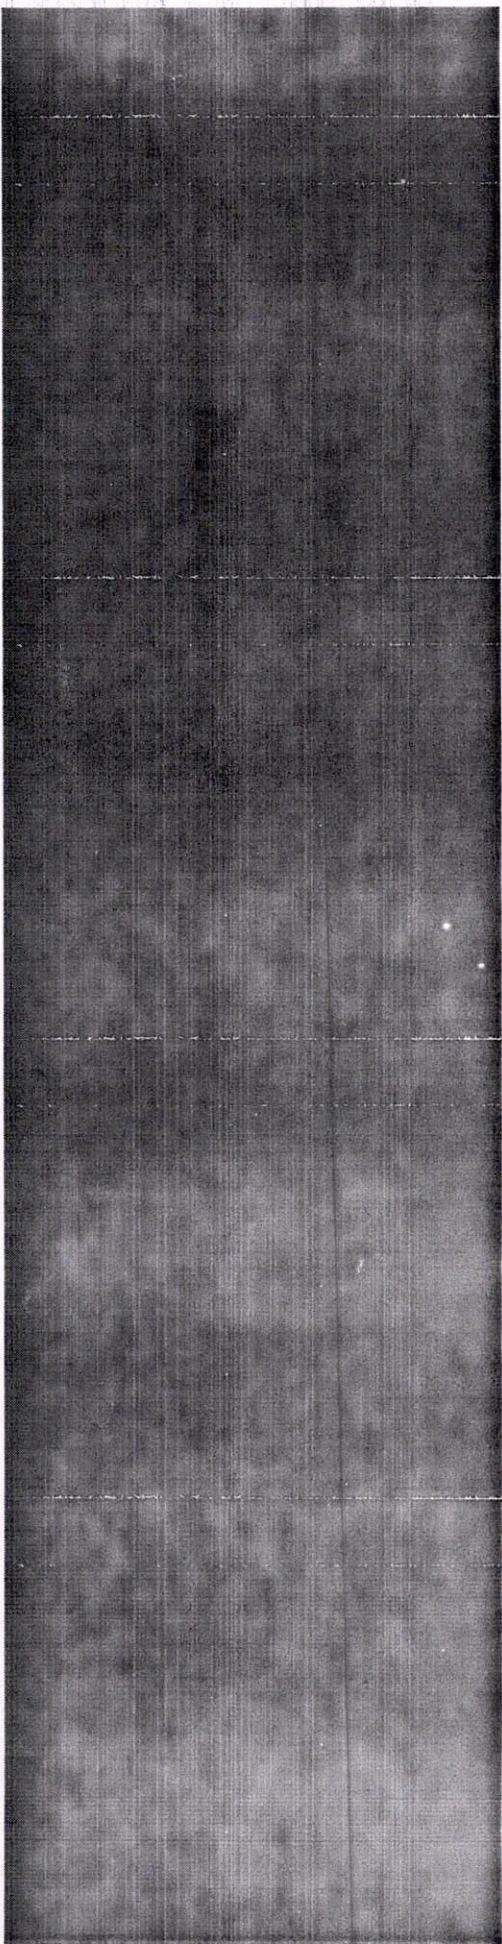

Ashok Leyland

Research Trainee

September 2011 - October 2011 (2 months)

- Worked on a project in lean manufacturing and the processes involved in maintaining quality of molds for precision casting.
- Using visual, quality fixtures and ultrasound, performed quality testing and assurance for precision casting
- Developed a process for reducing wastage by salvaging the rejected casting.

Education

Staffordshire University

Master of Science (M.Sc.), Autosport Engineering · (2015 - 2016)

Shanmugha Arts, Science, Technology and Research Academy

Bachelor of Technology (B.Tech.), Mechanical Engineering · (2007 - 2011)
