

# REPORT

Name of the Institution: **Government General Degree College, Ranibandh.**

AISHE CODE: **C-53264**

Adopted Villages:

- 1. BANSHDIHA**
- 2. JHILIMILI**
- 3. CHURKU**
- 4. RAMGAR**
- 5. MUCHIKATA.**

We have successfully conducted some awareness campaigns - Plastic Free Zone, Water Conservation and Dengue prevention campaigns in the five villages that we have adopted for Unnata Bharat Abhiyan.

For '**Plastic Free Zone**' campaign we have visited those villages and instructed the villagers clearly as how to prohibit single use plastic products like water bottles, coffee cups, plastic bags, polystyrene foam items, etc and made them understand the harmful effects of plastic pollution and its effect on environment and on us. We have also instructed them on how to avoid plastics and look for alternatives like using jute, cloth or paper bags, and suggested to at least reuse them as many times as they can before disposing the plastics off if they had to use plastics.

Also on the occasion of **Iswar Chandra Vidyasagar 200<sup>th</sup> birth anniversary**, Unnat Bharat Abhiyan and Government General Degree College Ranibandh (NSS Unit-1) organized an awareness campaign to discourage the use of single-use plastic. This movement was carried out as a part of a broader campaign nationwide, initiated by Honorable prime Minister of India of single use plastic by 2020. As early morning we started procession from our college to nearby out side village. Our students, teaching faculty and non-teaching are happily participated the procession, and finally the end of procession we got gathering our conference room, our Principal sir delivered awareness lecture about disadvantage of using plastic bags and also delivered lecture about the memory of our national hero Iswar Chandra vidyasagar.

For **Water Conservation** we have come to understand that the villagers solely depend on tube well and pumping for their daily need of water and farming due to the lack of both water conservation knowledge and absence of water reservoir. We have communicated and instructed through different programmes as to how reduce the unnecessary wastage of water and the recycling of water to maintain the underground water level as per the process of "earth keeping" by conserving rain water by digging ponds, lakes, canals, etc. we also understand that to conserve the underground water level, the villagers are in a dire need of water reservoirs.

For “**Dengue Prevention Campaign**” we have visited the adopted villages and explained the villagers clearly about the dangerous and deadly disease dengue and instructed them how to prevent from Dengue. The most effective way to get rid of dengue is awareness among the peoples. We all joined our arms against the fear of dengue. We gave awareness message to the people of the villages. Some of us bore flags bearing preventive measures relating to how to tackle the disease. All of us went door to door campaigning in the locality beside our College. “We can win against dengue” – was our message. We have also cleaned our college campus to keep clean and healthy environment and also to give the awareness message to the students.
