### REPORT ON UNNAT BHARAT ABHIYAN ACTIVITY PROGRAMME

<b>Activity Title:</b>	<b>“Plantation Awareness”</b>		
<b>Students participated in the event</b>	R Bhoomika, Sanjana K, Pushparani M, VamshaAttavar	<b>Number of student participated in the event</b>	:04
<b>Beneficiaries Village Name</b>	Araledibba,	<b>Benefitted peoples</b>	: Araledibba, Village.
<b>Location:</b>	Araledibba, T.Begur Gram Panchayat, Nelamangala Block, Karnataka, Bangalore Rural	<b>Date between:</b>	21/4/2024 To 12/05/2024

#### **Brief Summary of the activity:**

The increasing need for environmental conservation has become prominent in the past few years. Several organizations have started initiative stop remote environmental welfare, and have targeted one particular group—the youth. We students call this program as ‘Go Green’, and we provided free saplings to the villagers in the rural parts of the Bangalore (Araledibba) there by enhancing the awareness of plantation and the environment. The villagers were promoted with a great source of knowledge on how the plants has to be raised in every part of the area to conserve the good atmosphere for the future generation, they were likely had a few knowledge about the plants and their conservation which we were happy about but auxiliary information gave them extra credits to raise their own plants, at least one plant per home to maintain the vegetation.

### Outcome of the activity:

Plantation is recognized as one of the most engaging, environmentally-friendly activities that people can participate in to help the planet when done properly. Trees provide numerous long-term and short-term benefits. They not only look adorable, but they also remove and store carbon from the atmosphere, slow down the process of heavy rain and thus reduce the risk of flooding, improve air quality, and reduce the urban heat island effect by reflecting sunlight and providing shade. When you plant a tree, you are not only planting a sapling but also hoping for the best. We have learned the hard way that trees are critical to our survival. We began by deforesting the earth to make room for more buildings. Later, when we adage the environment deteriorating, we were introduced to “a forestation,” a simple process of planting more trees for a better future. Tree plantation is significant because it is linked to our basic need for good food to eat and clean air to breathe. Aside from these necessities, they preserve biodiversity, conserve water, and preserve soil, and control climate, among other things. We recognise that one of the most serious issues in the current state is the devaluation of trees. To make our world greener and better, we must pay more attention to plantation in the future. Individual contributions should be made first. We should also put a stop to tree cutting and remember that without trees, there will be no life. Plantation is very important in our lives. Every ones hold be aware of the importance of tree planting and should motivate and encourage others to do the same.
