#### **Brief Summary of the activity:**

Being in the garden city, we feel proud of its beauty. It's our responsibility to protect its name and fame from increasing pollution and global warming. We a group of six student decide to create a awareness program about plantation to protect the environment from pollution and decrease global warming in some villages that are away from the city. Plants and trees are the prime sources of environmental purification and beautification. So we thought this would be a best and basic way to create awareness about plantation by providing a saplings to plant. The villagers were excited to hear about the importance about the activity and were happily supported us by accepting the sapling and taking pictures with us to ,they encouraged us for the successful completion of the awareness program activity.

## **SKIT UNNAT BHARAT ABHIYAN**

Through this program we came across many things about plantation and its benefits. Tree plantation should be regularly followed as they play a major role in many environmental developments and in sustaining ecosystem. It combat many environmental issues like soil erosion, deforestation, desertification, global warming, and hence enhancing the beauty and balance of the environment. As something is better than nothing, it was our small step forward to create awareness about plantation that will certainly help in protecting our garden city as well as environment.

The program on plantation awareness we came across many about benefits of plantation. This activity gave us a chance to interact with the local people and use that opportunity to make them understand the meaning and benefit of tree plantation. Moreover, it felt proud serving the society where we live and eventually serving the motive of the government to make the nation green. It has filled us with lots of courage and belief that these kinds of activities are really helpful in making things happen through interaction and through sharing of knowledge.

Finally, as we know, something is better than nothing, it was our small step towards creating awareness among the people which will obviously play a vital role in the conversation of the environment.
